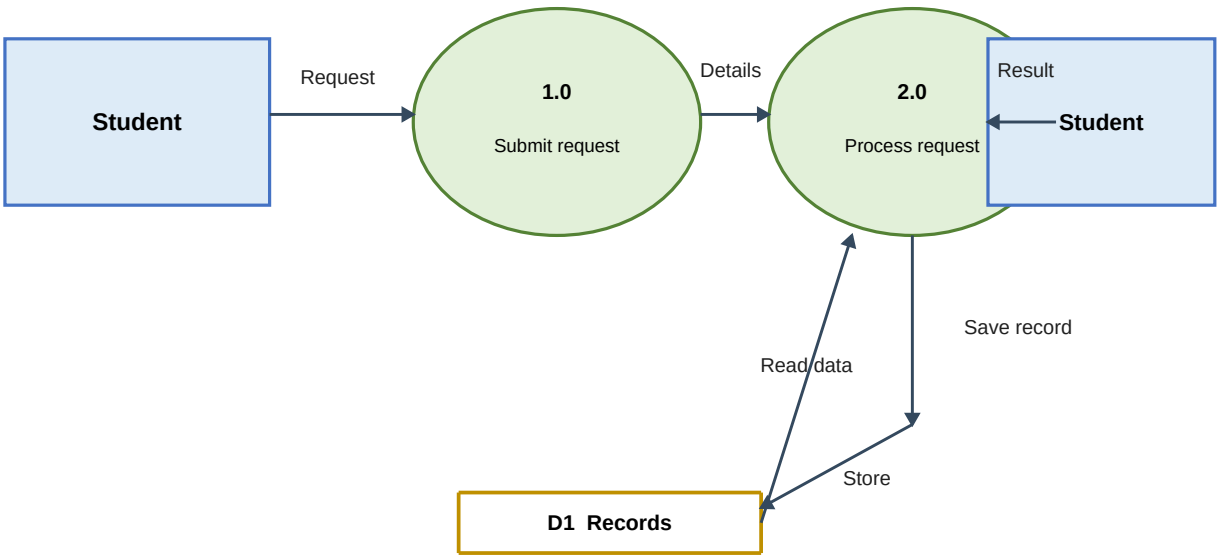
LAB 5: DATA FLOW DIAGRAM (DFD)

Level 1 DFD — Illustrative Student Request System

Objective: To show how data moves between external entities, processes, and data stores in a system.

Note: The lab title does not specify a particular system. This is a generic example; if your teacher assigned a specific system, the diagram should be adapted to that scenario.



DFD symbols: Rectangle = External entity; circle = Process; open-ended/parallel lines = Data store; labelled arrow = Data flow.

Explanation: The student submits a request. The system processes the request, stores relevant records, retrieves data when needed, and returns a result to the student.
